

completed and published his guidebook to rock climbing in the vicinity of Squamish. Construction of a 25-man shelter near Singing Pass in Garibaldi Park has been set back by bad weather and helicopter malfunction, but should be completed by year's end.

RICHARD R. CULBERT

*Chicago Mountaineering Club.* The principal club activity was the August outing at Island Lake in the Wind Rivers of Wyoming, with 49 members participating. For the first time in several years the Club completely outfitted the camp, and the arrangements were highly successful. With superb weather prevailing, most of the major peaks in the area were climbed: Cairn, Ellingwood, Fremont, Helen, Jackson, Warren, Sacajawea, Vertex, and the Minor Peaks. Four members (John Peterson, Bill Coats, Bob Stolzenbach, and Olle Swartling) participated in the Minnesota expedition to Mount McKinley. The West Buttress was followed to the summit, which five members of the expedition reached on June 8 and 9. Others who journeyed far afield for climbing adventures were Bill Wegworth and Lothar Kolbig who climbed Ruwenzori in Uganda with the Iowa Mountaineers. Frances Mullen climbed in the New Zealand Alps and also hiked in Nepal in the Kali Ghandaki valley between Annapurna and Dhaulagiri. Don and Gwen Simpson climbed in the Italian Dolomites.

Closer to home, outings were well attended throughout the year at Devils Lake, Wisconsin, and at Mississippi Palisades, Savanna, Illinois.

GEORGE POKORNY

*Colorado College Mountain Club.* The CCMC continued to hold its local rock schools and climbing trips to introduce new members to the sport of mountaineering. The participation of a large number of active members added to the success of our activities. Our rock schools covered the basics of climbing, including belaying, rappelling, and piton work.

Club members climbed many of Colorado's "fourteeners." One of the toughest climbs was an attempt on the north face of Blanca Peak, where an unusual amount of snow for September halted the climbers below the summit. One notable success put 12 people on the summit of Mount Sneffels. John Auld and several other members are developing a new rock-climbing area at Cathedral Park south of Pikes Peak. Numerous difficult, extended routes have been completed, but many granite faces ranging up to 800 feet in height remain to be climbed.
