

Norman (4016 feet) and an adjacent peak, Mount Senderens (4315 feet). The expedition was to commemorate the centenary in 1991 of the Mountain Club of South Africa. We also made the first South African ascent of Admiralty Peak (3100 feet) and several other minor peaks. Jamieson and I explored the Kohl-Larsen Plateau on skis, reaching this from a camp on the edge of the Konig Glacier. We made a determined attempt on Mount Paget by a new route on the east face but were driven back by high winds, bad snow conditions and unpredictable weather. The return voyage back to Cape Town was completed in 16 days. The total distance sailed—Cape Town-South Georgia-Cape Town—was 15,000 kilometers.

EUROPE

Eiger. A full article on the remarkable solo climb of the north face of the Eiger in winter by Jeff Lowe appears earlier in this *Journal*. It should be noted that Lowe's good friend, Catherine Destivelle, made the first female solo winter ascent in the late winter of 1992.

Stortind Southwest Ridge, Norway. There is a complete article on this climb in Norway earlier in this *Journal*.

OCEANIA

Sabah, Borneo, Malaysia

Mount Kinabalu. On July 24, my daughter Helene, Dr. Karl Lengauer and his wife Bertl Lengauer and I climbed through the gorgeous jungle with rare and beautiful flora to the Laban Rata Hut. On July 25, we climbed in three hours to the highest point of Mount Kinabalu (4101 meters, 13,455 feet) on the normal ascent route, which is secured in part by fixed ropes. We were very impressed with the beauty of the mountainous region and by the excellent organization and comfortable facilities in the Kinabalu National Park. This was obviously no new ascent. The first recorded climb was made in 1851 by Sir Hugh Low. However, we were particularly impressed by the north faces of the Kinabalu Massif, which rise precipitously for over 1000 meters. This is an untouched paradise for the extreme rock climber in a setting of incredible natural beauty.
