* Indicates that all known units in the state or province reported in 1964.

In the above table "rescue members" is used to indicate personnel trained and able to work in the field, as differentiated from other members of rescue groups who perform administrative chores. The listing for 1963 is for "man-days," while in 1964 man-hours are given. No effort has been made to convert the man-day figure to man-hours. Man-hours are used in the statistics of the Air Rescue Command, which works closely with rescue units. Units become involved in some lowland rescues in reciprocity for air support, or because their skills are required on cliffs, etc.
